

# DKN-MS41-7xx3 Series

## 7Nm (60 lb-in.) & 15Nm (133 lb-in.) Spring Return Actuator Installation Instructions

DKN-MS41-7073  
DKN-MS41-7153

### Requirements

- Job wiring diagrams
- Tools and hardware (not provided):
  - #8 sheet metal screws (for universal bracket)
  - 10 mm open end wrench or socket wrench (universal V-clamp)

### Precautions

#### Notice

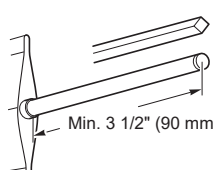

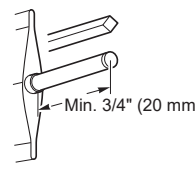

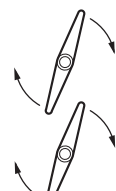

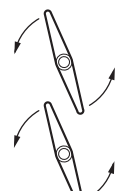

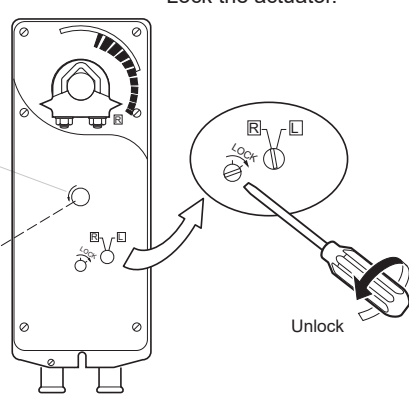

- Electrical shock hazard! Disconnect the power supply (line power) before installation to prevent electric shock and equipment damage.
- Make all connections in accordance with the job wiring diagram and in accordance with national and local electrical codes. Use copper conductors only.
- Do not drill holes in the actuator body. Six pre-drilled holes are located on each side, under the label (Figure 2).

# Mounting

## DKN-MS41-7xx3 Series Installation

### Notice

- The DKN-MS41-7073 and DKN-MS41-7153 series actuators come equipped with a standard universal mounting installed.
  - If the universal clamp is not set to 0° on the position indicator, manually wind the actuator in the direction indicated with hex wrench from -5° to 0° and lock with a screwdriver.
- The DKN-MS41-7xx3 actuators are equipped with a manual override. The manual override is to be used only when power is not applied to the unit.
  - When operating manual override, back off 5° from full open mechanical stop to ensure proper release.
  - Do not attempt to use the manual override with actuators mounted in tandem. Damage to the gear train could occur.
  - Using power tools to adjust the manual override will cause damage to the gears.
  - To unlock manual override without power, crank the manual override in the direction indicated a minimum of 5°.

<p>3/8" to 3/4" Diameter (10 mm to 20 mm) 3/8" to 1/2" Square (10 mm to 13 mm)</p>	
<p>Move the damper to its normal position. Verify the controller action is set to match the damper application.</p> <p>Normally closed damper: when damper is closed, actuator position indicator should be at 0°. When damper is open, actuator position indicator should be at 90°.</p> <p>Normally opened damper: when damper is open, actuator position indicator should be at 0°. When damper is closed actuator position indicator should be at 90°.</p>	
<div style="border: 1px solid black; padding: 5px; margin-bottom: 5px;"><b>A - Left</b></div>  <p style="text-align: center;"><b>Shaft Rotates Clockwise To Open</b></p>	<div style="border: 1px solid black; padding: 5px; margin-bottom: 5px;"><b>A - Right</b></div>  <p style="text-align: center;"><b>Shaft Rotates Counterclockwise To Open</b></p>
<p>This step determines shaft rotation. Linkage may change damper direction.</p>	
<div style="border: 1px solid black; padding: 5px; margin-bottom: 5px;"><b>B</b></div> <p style="text-align: center;">If position indicator does not point to zero: Unlock the actuator. Insert hex wrench into manual override. Crank the actuator so the indicator points to 0°. Lock the actuator.</p> <div style="display: flex; align-items: center; justify-content: center;"> <div style="margin-right: 20px;"> <p>Manual Override</p>  </div> <div style="text-align: center;">  <p>Unlock</p> </div> </div> <p>Fully engage hex wrench into manual override before winding.</p> <p><b>Caution:</b> Do not crank the manual override if power is applied to the actuator.</p>	

### C - Left - Long Shaft

"L" Marker

1. Assemble mounting clamp.
2. Assemble retaining clip.
3. Place actuator over shaft.
4. Hand tighten clamp nuts.

1 Universal mounting clamp.  
2 Retaining clip.

### C - Right - Long Shaft

"R" Marker

1. Assemble mounting clamp.
2. Assemble retaining clip.
3. Place actuator over shaft.
4. Hand tighten clamp nuts.

1 Universal mounting clamp.  
2 Retaining clip.

For DKN-MS41-7073 and DKN-MS41-7153 actuators:

Correct clamp mounting position if actuator is locked with 5° preload.

---

### C - Left - Short Shaft

"L" Marker

1. Position mounting clamp.
2. Assemble retaining clip.
3. Slide actuator over shaft.
4. Hand tighten clamp nuts.

A Assemble damper position indicator.  
B Assemble retaining clip.

1 Universal clamp.  
2 Retaining clip.  
3 Damper position indicator.

### C - Right - Short Shaft

"R" Marker

1. Position mounting clamp.
2. Assemble retaining clip.
3. Slide actuator over shaft.
4. Hand tighten clamp nuts.

A Assemble damper position indicator.  
B Assemble retaining clip.

1 Universal clamp.  
2 Retaining clip.  
3 Damper position indicator.

For DKN-MS41-7073 and DKN-MS41-7153 actuators:

Correct pointer mounting position if actuator is locked at 5° preload.

### D - Left and Right

**Center the  
Universal Bracket in the Slot**

5. Center bracket in slot.
6. Drill two holes.
7. Start one screw.  
For DKN-MS41-7073 and DKN-MS41-7153 actuators, insert and tighten both screws.
8. Swing bracket down.

#8 Sheet Metal Screw

### E- Left

### E- Right

9. Loosen clamp nuts.
10. Check that the shaft is in full zero position.
11. Tighten clamp nuts to 8 - 10 ft-lb (11 - 14 Nm).  
This completes the installation
12. Swing actuator 5° in the direction of travel. Do not move shaft.
13. Tighten clamp nuts to 8 - 10 ft-lb (11 - 14 Nm).
14. Move bottom of actuator back into position.
15. Pivot bracket back into position.

F- Left

F- Right

16. Tighten bracket screws.

Correct pointer position after mounting.

The lock on DKN-MS41-7073 and DKN-MS41-7153 will release on first power-up.

## Rotation Limitation

### Rotation Limitation for DKN-MS41-7xx3 Series

Note: Limiting the rotation of the actuator also reduces the system throttling range. Be sure to adjust the controller's throttling range accordingly.

The rotation limiter is used in conjunction with the tab on the universal clamp or the position indicator. In order to function properly, the clamp or indicator must be mounted correctly.

The rotation limiter controls the rotational output of the DKN-MS41-7073 and DKN-MS41-7153 actuators. It is used in applications where a damper has a designed rotation that is less than 90°, for example with a 45° or 60° rotating damper. It can also be used to provide a minimum damper position which is easily set, or changed, without removing the actuator from the damper.

1. Determine the amount of damper rotation required.
2. Locate the rotation limiter on the actuator so that its edge lines up with the degree graduation on the actuator face which corresponds with the required rotation. See Figure 1.
3. Find the appropriate cross hair location through the slot of the rotation limiter. This is the mounting location for the retaining screw.
4. Pierce through the label material to allow easy fastening of the retaining screw.
5. Position the rotation limiter back to the desired position, making sure the locating "teeth" on the rotation limiter are engaged into the locating holes on the actuator.
6. Fasten the rotation limiter to the actuator using the self-tapping screw provided.
7. Test the damper rotation by applying power and the required control signal. Readjust if necessary.

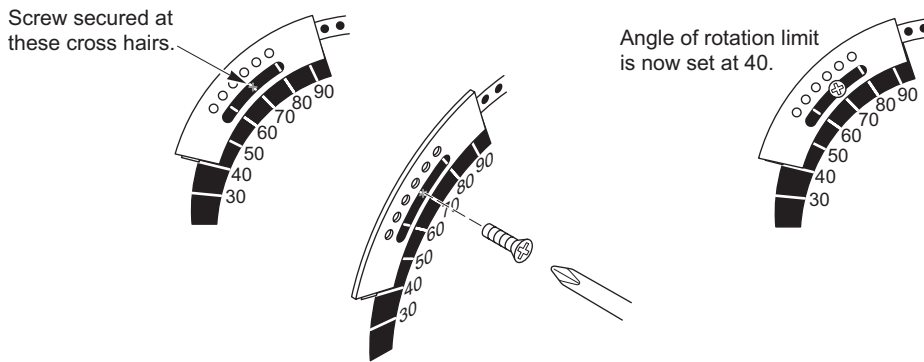

Figure 1 Securing the Rotation Limiter.

## Typical Applications (Wiring Diagrams)

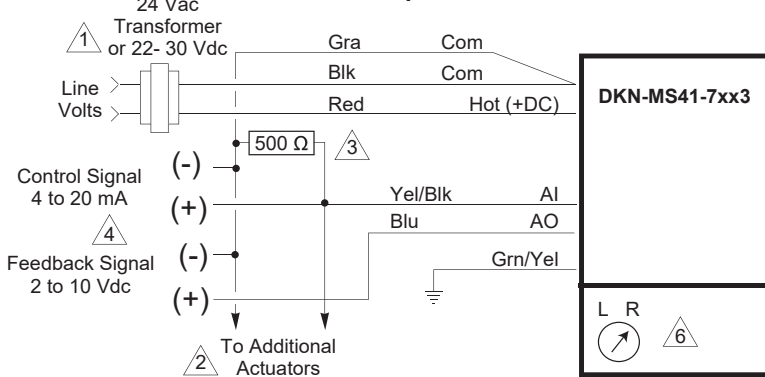

### DKN-MS41-7073 and DKN-MS41-7153

Notice: This product contains a half-wave rectifier power supply. It must not be powered with transformers that are used to power other devices utilizing non-isolated full-wave rectifier power supplies. Refer to EN-206 Guidelines for Powering Multiple Devices from a Common Transformer.

#### 2 to 10 Vdc Proportional Control

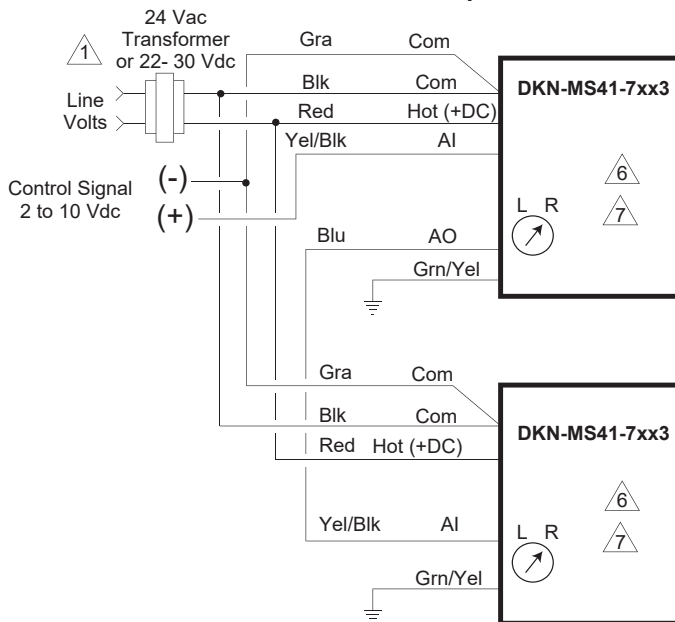

#### 4 to 20 mAdc Proportional Control

- 1 Provide overload protection and disconnect as required.
- 2 With four actuators wired to one 500 ohm resistor, a +2% shift of the control signal may be required. (Actuator input impedance is 80 kohm)
- 3 A field-supplied 500 ohm resistor is required between the gray and yellow/black leads to convert the 4 to 20 mAdc control signal to 2 to 10 Vdc.
- 4 Only connect common to negative (-) leg of control circuits.

#### Two Actuators on the Same Damper Shaft

- 6 To reverse actuator rotation, use the reversing switch.
- 7 Both actuators must be set to operate in the same direction.
