

# DKN-MP500C

## Installation and Configuration Instructions

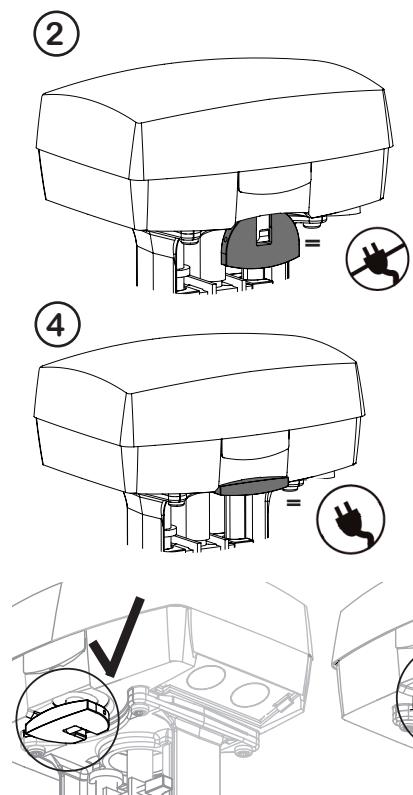

## Mounting and Installation

## Dip Switch Selection and Electrical Connections

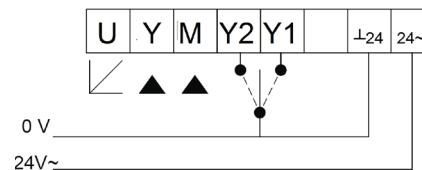

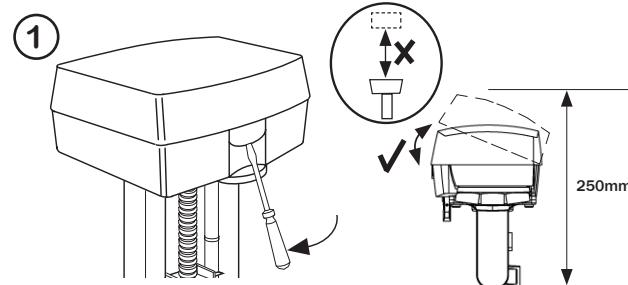

1. Remove cover by levering up the front tab and pivoting backwards. Replace cover by reversing process, locating the rear edge before tilting in to place.
2. Flip down Manual override lever to disengage power and the operating signal to the PCBA. Wire actuator accordingly.
3. Make necessary electrical connection and dip switch changes (Switch 1-8).
4. Raise manual override lever; the actuator then verifies valve open position.
5. Operate Dip Switch 9 to calibrate valve.

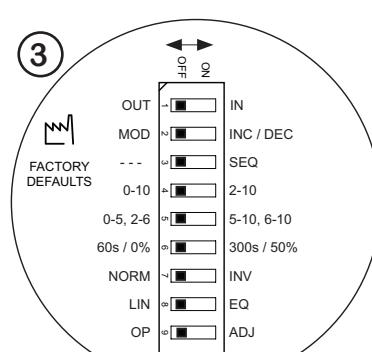

## Terminal Connections

Terminal	Function	Description
24~	24 Vac	Supply voltage
-24	Ground	
Y	Input, proportional	Modulating Control signal
M	Input, neutral, proportional	
Y2	Increase, 3-point	Floating/Digital (Y1, Y2 connected to -24)
Y1	Decrease, 3-point	
U	0...100% (2...10 Vdc)	Feedback signal (reference to -24)

24~, -24= Max 100 m (328ft.), 1.5 mm<sup>2</sup> (AWG 16)  
Other cables: Max 200 m (656 ft.) 0.5 mm<sup>2</sup> (AWG 20)

Always calibrate the actuator using Dip switch 9 after mounting onto the valve and electrical power has been applied. Momentarily move switch 9 to ON and then back to Off again to start the automatic end stop calibration process.

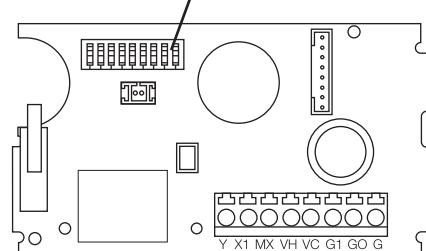

Pg.3 Kalibrera alltid ställdonet med doppomkopplare 9 efter montering på ventilen och elektrisk ström har anslutits. Flytta momentant omkopplare 9 till ON och sedan tillbaka till Off igen för att starta den automatiska slutstoppkalibreringsprocessen.

S. 3 Kalibrieren Sie den Antrieb immer mit dem Dip-Schalter 9, nachdem Sie ihn am Ventil montiert und mit Strom versorgt haben.

Stellen Sie den Schalter 9 kurz auf ON und dann wieder auf Off, um den automatischen Endstopp-Kalibrierungsprozess zu starten.

Pg. 3 Toujours calibrer l'actionneur à l'aide du commutateur DIP 9 après le montage sur la vanne et l'alimentation électrique a été appliquée.

Déplacez momentanément le commutateur 9 sur ON, puis de nouveau sur Off pour démarrer le processus d'étalementage de fin de course automatique.

g 3 安裝到閥門上並通電後，請始終使用撥碼開關9校準執行器。暫時將開關9移至ON，然後再次移至Off，以開始自動終點止動校準過程。

Pág. 3 Siempre calibre el actuador usando el interruptor DIP 9 después de montarlo en la válvula y de haber aplicado energía eléctrica.

Mueva momentáneamente el interruptor 9 a ON y luego de nuevo a Off para iniciar el proceso automático de calibración de parada final.

Pg. 3 Всегда калибруйте привод с помощью микропереключателя 9 после установки на клапан и подачи электроэнергии. На мгновение переведите переключатель 9 в положение ON, а затем снова в положение Off, чтобы начать процесс автоматической калибровки конечного упора.

Note: The DKN-MP500C actuators are very flexible and can be configured to function on a number of valves or applications but in general it is expected the actuator will be operated with all configuration settings in the Off position.

SV. Obs: DKN-MP500C ställdon är mycket flexibla och kan konfigureras för att fungera på ett antal ventiler eller applikationer, men i allmänhet förväntas att ställdonet kommer att användas med alla konfigurationsinställningar i läget Av.

Hinweis: Die DKN-MP500C-Stellantriebe sind sehr flexibel und können so konfiguriert werden, dass sie an einer Reihe von Ventilen oder Anwendungen funktionieren. Im Allgemeinen wird jedoch erwartet, dass der Stellantrieb mit allen Konfigurationseinstellungen in der Position Aus betrieben wird.

Remarque: Les actionneurs DKN-MP500C sont très flexibles et peuvent être configurés pour fonctionner sur un certain nombre de vannes ou d'applications, mais en général, il est prévu que l'actionneur fonctionnera avec tous les paramètres de configuration en position Off.

Nota: Los actuadores DKN-MP500C son muy flexibles y se pueden configurar para funcionar en varias válvulas o aplicaciones, pero en general se espera que el actuador funcione con todos los ajustes de configuración en la posición de apagado.

CN. 注意: DKN-MGxxx执行器非常灵活, 可以配置为在多种阀门或应用上运行, 但是通常, 期望执行器在所有配置设置为“关”位置时都可以运行。

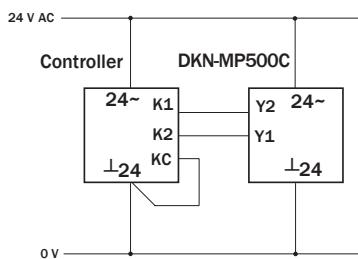

RU. Примечание. Приводы DKN-MGxxx очень гибкие и могут быть настроены для работы с рядом клапанов или приложений, но в целом ожидается, что привод будет работать со всеми настройками конфигурации в положении «Выкл.».

## Dip Switch Settings

		→ ON	
CLOSE (on power up, actuator closes VP220x valve)	↓	OUT	IN
	0 % →	1	OPEN (On power up, actuator Opens VP220x valve)
(Proportional)	MOD	INC/DEC	(3-Wire Floating)
		2	↑ ↓
	---	SEQ 1	2
		3	
	0-10 (MOD)	4	
	2-10 (MOD)	4	
	0-5, 2-6 (SEQ)	5	
	5-10, 6-10 (SEQ)	5	
	60 s (INC)	6	
	300 s (INC)	6	
	NORM (DIRECT)	7	
	INV (REVERSE)	7	
	LIN	8	
	LIN	8	
	EQ	8	
	OP (RUN)	9	
	ADJ	9	

## Wiring Diagrams

### Increase/Decrease (Floating)

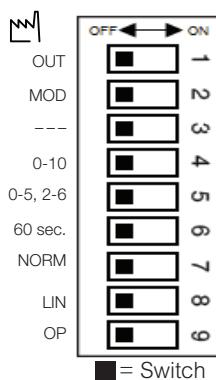

50VA transformer required per actuator.

50VA transformer required per actuator.

### Dip Switch Settings

■ = Switch

Sw	Description	OFF Position	ON Position
1	Valve closing direction	OUT (extends down to close the valve)	IN (Retracts on a closing signal)
2	Control mode	Modulating	Increase/decrease (floating)
3	Sequence control	-	Sequence
4	Input voltage range	0...10 Vdc	2...10 Vdc
5	Sequential voltage range	0...5 Vdc or 2...6 Vdc	5...10 Vdc or 6...10 Vdc
6	Running time (increase/decrease)	60 s	300 s
7	Normal Direction of movement	Normal	Inverted
8	Flow Characteristic	Linear	EQ Changes a Linear PIBCV valve to a logarithmic behavior
9	Operation/Stroke Calibration	Operation	Stroke Calibration

There is a 9 switch configuration block on the circuit board. The factory setting is all switches in the "OFF" position. Adjust these settings prior to engaging power and any subsequent changes to the DIP switches will not be registered until the power is interrupted, or when switch No. 9 is initiated for stroke calibration.

#### • SW1 Valve closing direction.

- OFF: Actuator fully extends to a closing control signal (normal operation for VP220x SmartX PIBCV).
  - ON: Actuator fully retracts on a closing control signal.
- On power up, the actuator will move to the closed position as set from Switch 1 before becoming under the command of the control signal.

The direction of operation from the input control signal and the position feedback signal will also be influenced by switch 7.

#### • SW2 Control signal MOD / INC.

- DKN-MP500C is either controlled by a variable direct voltage, for a modulating signal (MOD), or by a 3-point increase/decrease signal (INC).

#### • SW3 Sequence or parallel control - - /SEQ.

- With sequence (or parallel) control (SEQ), two actuators/valves can be controlled by only one control signal. See switch 4 and 5 to select the control signal range
- If sequence or parallel control is not used, the switch - - / SEQ must be in the OFF position.

#### • SW4 Input Voltage range 0...10 / 2...10.

- Choose between 0...10 Vdc or 2...10 Vdc control signal range. 0...20mA or 4...20mA is possible with connection of the optional 500 Ohm resistor.

#### • SW5 Operational voltage range (0..5, 2..6 / 5..10, 6..10)

When switch 3 (SEQ) is ON choose the operational voltage range.

- OFF: low: 0...5 V (2...6 V)
- ON: high: 5...10 V (6...10 V)

The bracketed control voltage is operational with switch 4 ON.

#### • SW6 Running time 60 s / 300 s.

- On increase/decrease control, this switch selects the running time between 60 s (Off) or 300 s (On). With modulating control, the running time is always 15 s.

#### • SW7 Direction of movement NORM / INV.

- OFF (NORM): Normal direction of movement. Actuator retracts to provide an open valve on an open control signal.
  - ON (INV): Inverse direction of movement. Actuator extends to provide a closed valve on an open control signal.
- This operation is reversed with Sw.1 ON but this may be desired if the power up position according to switch 1 needs to be flipped. Feedback is directly linked to switch 7 and is not influenced by switch 1.

#### • SW8 Flow Characteristic LIN/EQ. The motorized valve characteristics can be modified.

- The setting EQ will change the VP220x valve from a linear flow characteristic to an equal percentage.

#### • SW9 Input signal and stroke Calibration OP / ADJ.

- This switch is only used to calibrate the stroke end positions.
- To initiate, momentarily move the switch to the ON position then back to the OFF position. At the end of the adjustment all the other dip switch settings (1 to 8) will be registered again.
